

PRESS RELEASE

Dunapack Spremberg and EUROBOX Polska opt for new Bahmueller specialty folder gluer „TURBOX II“

With its new investment in two modern TURBOX II BJD 1700/1450 specialty folder gluers, the Dunapack-Group confirmed its competence and competitive position in the corrugated board industry. A first installation was successfully completed in November 2011 at Dunapack Spremberg, the second followed in December 2011 at it's sister plant EUROBOX Polska.

Main decision criteria focused on box style flexibility, short set-up times and output performance. TURBOX II was convincing in all three categories.

Further, Bahmueller met Dunapack's specific custom machine design requirements. Thus, the company operates a machine covering the standard setup spectrum of a classic 1700 machine and in addition has the flexibility on the minimum sizes to cover the setup range of a 1450 machine. This provides the desired overlap between the existing and the new folder gluer without excluding the small format sizes.

Also the processing flexibility and folding quality of the TURBOX totally convinced with regards to flutes which can be processed: In its standard version the machine converts all flutes, from micro to double wall grades.

Another significant factor is the setup time due to smaller order sizes. TURBOX II sets the benchmark with its state-of-the-art Boxflow®Control system which supports automatic setup of variable styles and repeat orders in a fast and effective way without significant waste. Smaller quantities can be produced at a very competitive price.

In regards to front folding, the Dunapack Spremberg machine is equipped with the innovative servo front-fold technology „Unique Fold“. Compared to conventional mechanical front-fold hooks, „Unique Fold“ allows minimal distance between blanks and it prevents missed front folds. A significant output performance combined with a measurable quality improvement is achieved; all contributing to a very favourable return on investment.
