

PRESS RELEASE**FEFCO 2011: Main focus on latest innovation „Unique Eject“**

Together with its partner Göpfert from Wiesentheid, Bahmüller participated again in the annual FEFCO which took place from 23 to 25 March 2011 at the Olympia Parc in Munich. 650 delegates from all over Europe were counted this year.

Among numerous presentations as well as the attached exhibition, the companies were invited to promote their latest innovations during a 7-minute-spotlight. So did Ulrich Wolz, Managing Director Business Division Corrugated Board Converting Systems, who's presentation titled "Boxflow Quality Management" had its focus on the up-to-date innovation "Unique Eject". The newly developed reject gate for the Turbox II works in conjunction with any well-proven quality inspection systems and allows boxes detected as defective, due to folding inaccuracies and glue variations from set optimum values to be rejected at full machine speed.

This state-of-the-art innovation was successfully installed beginning of this year in an Inline machine Case Line CL 11/25 in the northern part of Germany as well as in a new specialty folder gluer TURBOX in the US.

Combined with the POWERPACKER II which will be finished end of this year, the Bahmüller TURBOX II can be seen as a fully automatic, highest flexible specialty folder gluer of the latest generation.

The next FEFCO will take place in Vienna from 18 to 20 April 2011.
