

PRESS RELEASE

New Service Technician for engineering support in the US

Charlotte, NC: Bahmueller Technologies, Inc. is pleased to announce that Freddie Mueller has joined BTI as a Senior Process Engineer for the specialty folder gluer group. Freddie started his career as a service technician for the folding carton machinery division of Jagenberg, today Heidelberg, in the 70ies. His 40 year career has also brought him to Bobst in a similar capacity. The last few years he has spent as an independent consultant and trainer for folding carton and corrugated gluers in Canada. "BTI is very pleased to have an individual of this caliber as part of our corrugated service team", says Andy Reissmann, VP of Sales. "As our business is growing in North America our customers deserve to have local application engineering support on this side of the Atlantic."

Over the recent months Freddie has received extensive product training on the Bahmueller equipment at our German HQ as well as here in the US. With Freddie's unique background we will not just be able to offer application engineering support for the Bahmueller Turbox / Topmatcher equipment but also for other major brands of specialty folder gluers, in particular set-up and run-optimization training.

Freddie can be reached through our Charlotte, NC service office at: (704) 587-3506.

Freddie Mueller
