

PRESS-RELEASE**First TURBOX specialty folder gluer installed at high-expanding Saicapack Group in Spain**

Ulrich Wolz, Managing Director of Plüderhausen, Germany-based Bahmüller GmbH, confirmed that the company recently installed a Turbox BJD 1700 speciality gluer at Saicapack Viana in northern Spain. As the plant produces a wide range of box styles, many of which include multiple pieces, the machine was equipped with the Topmatcher multi-piece feeder. "Saicapack told us that it was important that they chose a machine that was reliable and extremely flexible," states Mr Wolz. "The Turbox, combined with the Topmatcher, is perfectly suited to their needs. It can run one piece box styles such as straight line or 4 corner boxes, as well as multi-piece box styles, all at the highest production speeds and creating the best quality boxes possible."

Mr Wolz continues, "Other factors in the decision making process included ease of set-up and maintenance, and the Boxflow Control system was a key benefit in the eyes of Saicapack Viana. Due to its modular construction, the Turbox is quick to set-up, irrespective of job style or complexity."
