

## PRESS RELEASE

### Successful Showing at FachPack in Nuernberg

As in years before Wilhelm Bahmüller GmbH participated at Europe's most important packaging show from Sept 28th – 30th, 2010 in Nuernberg. A significant increase in visitors compared to previous years confirmed a robust business climate and a positive outlook for the packaging industry. Numerous customers and many interested representatives from corrugated companies visited the joint booth of Bahmueller and Göpfert to get updated on new developments. Bahmueller introduced the latest generation of its successful specialty folder gluer TURBOX II. This versatile machine has gone through continuous improvements over the past 4 years since its introduction. In order to maintain the leading position in the premium specialty folder gluer market many improvements were made to benefit output performance, setup times and total machine availability. As common with Bahmueller, users had a substantial input.

The ACE feeder now incorporates a lot of functions from the TOPMATCHER II, particularly precise feeding while running in timed mode. The pre-folder has evolved to also accommodate a silicon-strip applicator, code reading devices, as well as label and RFID applicator. A new fold-sequence in the Dynamic-Fold unit as well as a re-developed 6-corner attachment significantly shorten setup times. Further, the final-fold section has been improved to avoid fishtailing and influence gap control. The trombone delivery section has been entirely re-worked. It now can accommodate quality-control devices and an ejector. This is an absolute must when combining the equipment with the new POWERPACKER II, which will make its debut next year. The BOXFLOW®Control system also has been entirely updated. It now features a plausibility system, evaluating blank styles if they can be run prior to getting started on a setup, further cutting downtime and easing operator work.

The multi-piece feeder TOPMATCHER also received a lot of attention. This machine can produce multiple-piece packaging, up to three pieces, at high speed. With the help of videos and setup screens the functions of the equipment could be well explained and demonstrated. The traditional semi-automatic equipment also enjoyed strong interest by the show visitors. On the side of BGM Bahmüller Göpfert Maschinen GmbH the company officially introduced its box ejection system on the Caseline CL 11/25 – CL 13/32. Both companies enjoyed the strong support and positive resonance from the visitors while they in turn could enjoy typical Swabian and Bavarian specialties.

The next FachPack will be open September 25 – 27th 2012 in Nuernberg.
