

## **wellteam invests in new specialty folder gluer TURBOX**

The new Bahmueller TURBOX Type BJD 2300 which has been lately installed in Loehne, Germany, meets the special requirements of wellcarton Verpackungen und Displays GmbH & Co. KG for the optimal converting of special packaging e.g. for furniture industry. The extension of its machinery was necessary due to increasing scopes of orders regarding glued and folded automatic packaging. "With this investment around 1. Mio Euro we've successfully removed the lack of capacity in the range of big working widths. We are now able to produce with three specialty folder gluers to fulfil all orders just in time even in high season.", stated managing director Sieghard Schöneberg.

— The specialty folder gluer is new on the market. In cooperation with the dutch company JDengineers, Bahmueller has developed a modular machine concept which provides high efficiency in production as well as operator convenience and variability. The open construction, an integrated gluing system and the appropriate control system allow short set-up times and maximum production speed.
